

Diverter Screen Changer T ASD

for discontinuous filtration with start-up diversion

- One screen cavity
- With start-up feature
- Rectangular breaker plate

Discontinuous screen changers from Trendelkamp are built to meet the highest quality standards in polymer melt filtration. T ASD screen changers are based on the proven dual bolt design and are highly reliable.

Unique to all Trendelkamp screen changers are the curved and rectangular breaker plates. Utilizing this rectangular design offers the largest screen area per bolt size, enabling smaller overall machine size to operate greater throughputs. Furthermore, our thin, curved breaker plate design optimizes strength while maintaining more uniform bore length throughout the plate. The integrated diverter feature makes the start-up process easier and more efficient.

The Trendelkamp T ASD screen changer is suitable for a variety of extrusion applications that allow for short interruptions in production. For example, polymers with low levels of contamination, or melt pump protection.

Benefits:

- Reliable operation
- Fewer screen changes and lower screen cost
- Reduced shear stress on product
- Reduced pressure drop across screen changer
- Safe, easy operations and reduced maintenance
- Reduced extrusion line length
- No additional diverter valve and hydraulic unit required

Options:

- Oil, steam or electrical heating
- High-temperature design, up to 450° C
- Special coating for abrasive/corrosive applications
- Stainless steel design
- Hazardous area design

Diverter Screen Changer TASD

Functional Principle:

A rheological optimized flow channel leads the incoming polymer melt stream into a screen cavity. Inside the screen cavity a breaker plate is equipped with a filtration screen pack suitable for the required filtration fineness.

When a screen change is required, the bolt is moved hydraulically out of the housing so the screen pack can be changed. During this process the bolt blocks the melt flow until the required screen change has been completed and the bolt moves back into production mode.

The integrated divert feature allows the start-up melt stream to be diverted and purged from downstream processing.

Control Options:

- PLC control system
- Control system preparation for external PLC
- Heating control system
- Pressure and temperature monitoring

Design Features:

- Hydraulically operated
- Operating limits: 400 bar/400°C
- Differential pressure: up to 100 bar
- Energy efficient due to insulated housing
- LED Heating status indicator (from TASD 6-2)
- LED Bolt maintenance indicator (from TASD 6-2)

Applications:

- Compounding
- Masterbatch
